

This user-friendly integrated wireless system could be used for a chemical spill, a fire, a hurricane or a tornado. It is not just something you keep on the shelf in case of a national disaster or terrorist attack. It should be an everyday tool, just as you would use a patrol car or other police equipment. And it also allows police to communicate and instantaneously send secure information to themselves, to the fire department, and the ambulance team by the means of encrypted wireless digital communication.

This system also includes a data processing feature allowing officers instant access to databases such as building plans, terrorist lists, or descriptions of kidnappers using a Centrino laptop computer or Wi-Fi enabled PDA.

Benefits:

- Enhance Work Efficiency
- Emergency Fast Response
- Real-Time Communication with Police Station
- Field Multimedia Information real-time Transition
- Get Storage Data Support in Field
- Remote Command
