

Remote Central Management Software (RCM)

Com Code: SW21612822

- Enterprise class management and administration
- Accessed securely from anywhere across a wired or wireless TCP/IP network
- Greatly enhance work efficiency of network administrators.

Ease of Deployment and Expansion

Top Global RCM is a powerful management software for any Top Global 3G/4G products. It simplifies deployment and management, supports remote configuration, real-time monitoring, and performance and data usage reporting. It also reduces the operational burdens associated with device management, ensuring maximum uptime and performance with minimum cost and effort.

RCM ensures fast and accurate configuration of Top Global 3G/4G Routers/Devices. New device can be pre-provisioned prior to shipping and then automatically discovered and registered using the RCM server. In addition, Top Global provides an automated deployment wizard to assist with the configuration of these devices. Enterprise-wide or Device Group-wide policies (e.g., Access Control Lists) can be created and applied using customized templates, ensuring consistent configuration across all or a group of devices regardless of location.

Flexible and Secure Access

RCM offers different levels of user access that provide varying degrees of read/write privileges. A Web interface (HTTPS) ensures seamless and secure access to the RCM server from virtually any location.

Configuration and Availability

Top Global RCM comes on a standalone server with integrated database, which ensures easy setup and maintenance in any enterprise environment.

Real-time GPS Tracking

Top Global 3G/4G routers will send their GPS location information to a RCM server. And the RCM server stores the received tracking data into a database and visualizes device location with simple map software (Google Maps).

Product Specifications

Management Features:

- Enterprise Environment Oriented
- Easy Group Management
- Single/Group Device Configuration
- Configuration File Download & Upload
- HTTPS security access
- Flexible License Management
- Log File Backup
- GPS Tracking
- High Reliability
- Stand Alone Server and Database
- Firmware Remote Upgrade

Software Environments:

- Linux OS
- MySQL
- Java Runtime Environment
- apache-tomcat-5.5.20

Hardware Requirements:

- CPU: Intel/AMD 2.4GHz or higher
- Memory: 2G
- Hard Disk: 120G
- Network: 100Mbps Fast Ethernet x1
- CD-ROM: Combo or DVD-ROM
